For bright, motivated women interested in science and math, engineering is a challenging and rewarding career that offers opportunities to improve people's lives.

Providing Exceptional Opportunities

There's no better place to prepare for your engineering career than Northeastern. In the classroom and in the workplace, Northeastern's practice-oriented education helps you develop the intellectual and practical skill plus the personal maturity that lead you to a lifetime of achievement.

Take advantage of all that's available through Northeastern's Women in Engineering (WIE) Programs office—one of the oldest of its kind anywhere—and you gain even more. WIE connects you with mentors, tutors, career advice, financial aid, and other women in engineering—all the resources that promote your success in engineering.

Like the increasing numbers of women choosing to study engineering at Northeastern, you can discover how WIE can help you reach your full potential.

Meta Sengupta, *Senior, Mechanical Engineering*

NORTHEASTERN DISTINCTIONS

- + Member, American Society of Mechanical Engineers and Society of Women Engineers
- + International co-op, Sweden
- + Television appearance, *Dateline* (for co-op involvement with a new wheelchair giving people unprecedented mobility)

"In my capstone class, I'm working with other students to design a barge to demonstrate the power of Professor Gorlov's turbines. I'm most interested in its application. In developing countries, you could put these turbine devices in a river and run a refrigerator or an infirmary. You give people freedom by giving them access to power."
